Soumya Ranjan Sahoo

MERN Stack Full Stack Developer — React — Node.js — Express.js — MongoDB
+91 7609838533 | soumya1874@gmail.com | Portfolio: soumyaa.in | GitHub: Soumya1974 | LinkedIn: soumya1974

Summary

Full Stack Developer specializing in the MERN stack, experienced in building scalable web architectures, secure REST APIs, and robust authentication systems. Adept at translating business logic into clean, maintainable code across full-stack applications with advanced authentication and state management workflows. Hands-on with cloud-based storage and caching solutions such as Amazon S3, Redis, and Docker, along with real-time systems built using WebSockets and Socket.IO.

Technical Skills

Languages: JavaScript, Python, C, C++

Frameworks & Libraries: React, Node.js, Express.js, MongoDB, Redux, Tailwind CSS

Tools & DevOps: Git, GitHub, VS Code, Postman, Docker

Cloud & Storage: Amazon S3, CloudFront, Cloudinary, Redis

Projects

Constant | *Scaled 3D assets marketplace* *Sep 08 – Present*

- Architecting a **3D animation marketplace** for Minecraft creators, built on the **MERN stack**, handling **.glb, .gltf, .obj, and .fbx** assets, with **OAuth authentication**, creator profiles, and a searchable, browsable library of ready-to-use animations.
- Designed a **modular monolith** with independently scalable background workers, avoiding premature microservices while keeping the system production-ready, easy to maintain, and simple to split into services later.
- Built secure, **direct-to-S3 uploads** with **presigned URLs** and **CloudFront delivery**, backed by **Redis caching** for faster API responses and reduced load on the database and origin server.
- Implemented **BullMQ**-powered background workers for asset validation, format conversion, and thumbnail generation, with **authenticated short-lived signed download URLs** to keep creators' assets protected from unauthorized access.

SprintLab | *Realtime collaborative team platform* | Live | GitHub *Jun 02 – Aug 22*

- Developing a **Multi-tenant B2B SaaS** project management platform inspired by **Jira and Linear**, with real-time collaboration over **WebSockets**.
- Implemented **Role-Based Access Control (RBAC)** with project, task, and activity tracking, plus a live activity feed powered by **Socket.IO**.
- Built a **Tiptap-based rich text** notes editor and a **Gantt-style timeline view** for cross-team planning and documentation.
- Engineered a secure **JWT authentication** architecture using access and refresh tokens, alongside a drag-and-drop **Kanban board** built on **@dnd-kit** with touch support for mobile.

Veda AI | *Agentic AI Healthcare Platform* | Live | GitHub *Mar 10 – Apr 12*

- Built an **Agentic AI healthcare platform** enabling intelligent, real-time interactions between patients and healthcare professionals.
- Developed the complete application on the **MERN stack** with secure, **token-based authentication**.
- Integrated **AI-driven conversational workflows** delivering context-aware and personalized responses.
- Designed the system for **stateful conversations**, enabling extensible, multi-step **agentic workflows** for healthcare automation.

Education

Trident Academy of Creative Technology, Bhubaneswar *2025 – 2027*
Master of Computer Applications (MCA)

- **Coursework**: Computer Networks, Operating Systems, DBMS, Software Engineering
